Hard Wall Aluminium Sukkah - 2x3m Assembly Instructions

SAFETY WARNING - Please read before use

1. Your Sukkahmart Sukkah and / or Rain Roof is intended for use in a protected garden or yard. Do not install your Sukkah in an open area which is exposed to high winds which may blow your Sukkah over.

2. If you are installing a Sukkah in an open area, we recommend that you use the Super Sukkah ONLY.

3. Wherever you place your Sukkah, it is vital that you anchor your Sukkah down so that it cannot lift off the ground. If wind lifts the Sukkah off the ground, the Sukkah may collapse upon landing. This is especially important when using a Sukkah Roof.

4. You can weigh your Sukkah down, by placing sandbags or heavy objects on the bottom horizontal beam, or, for a Hard-Walled Sukkah on the anchoring brackets supplied. The Hard-Walled Sukkah also comes with adaptors which can be used to tie-down the Sukkah, or to fix the Sukkah to your house.

Hard Wall Aluminium Sukkah - 2x3m Assembly Instructions

The basic Sukkah kit is 2x3 Meters with a door and a window. Any size larger than this will come with separate 'extension' kits of 2 x 1 running meters or 2 x 2 running meters.

VERY IMPORTANT

The beams and panels are different sizes and it is crucial that you use the correct beams and panels in the correct places. The beams and panels are marked with colour stickers and it is essential that you follow this guide.

Basic Sukkah Kit 2x3 Contents

Door Beams and Panels (put these aside for your door)

Hinge Beams (2 beams joined together with hinges) - 1

Handle Beam (beam with handle and latch on) - 1

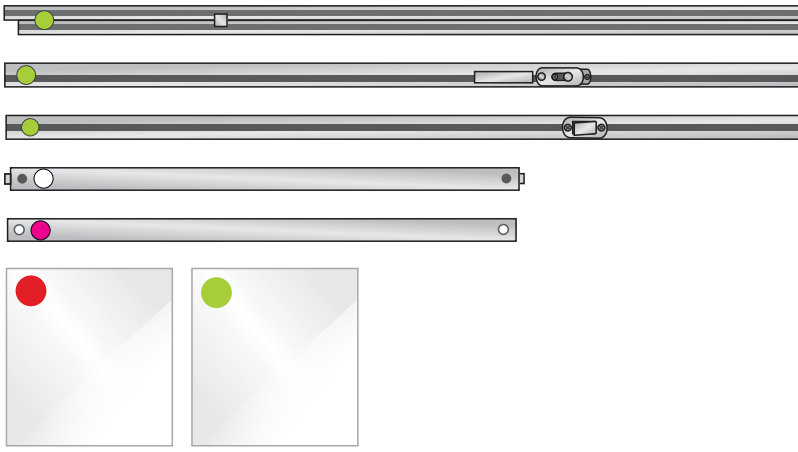

Hook Beam (beam with hook for latch on) - 1

Sukkah Elements Door (do **NOT** construct these yet)

Door beams and panels – (put these aside for your door)
Hinge Beams (2 beams joined together with hinges) - 1
Handle Beam (beam with handle and latch on) - 1
Hook Beam (beam with hook for latch on) - 1
Door Crossbeams (white sticker) - 3

2 Meter wall

3 Meter Wall

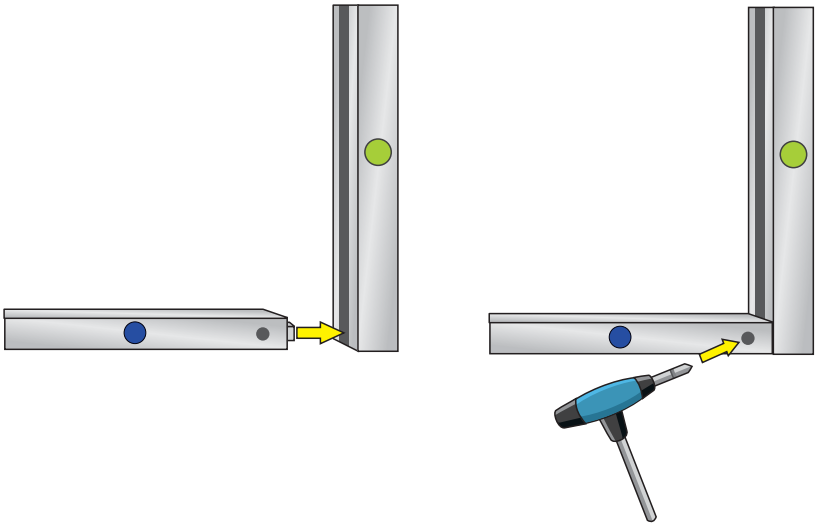

How the beams join together

Inset the lock into the slot

Ensure they are flush against each other

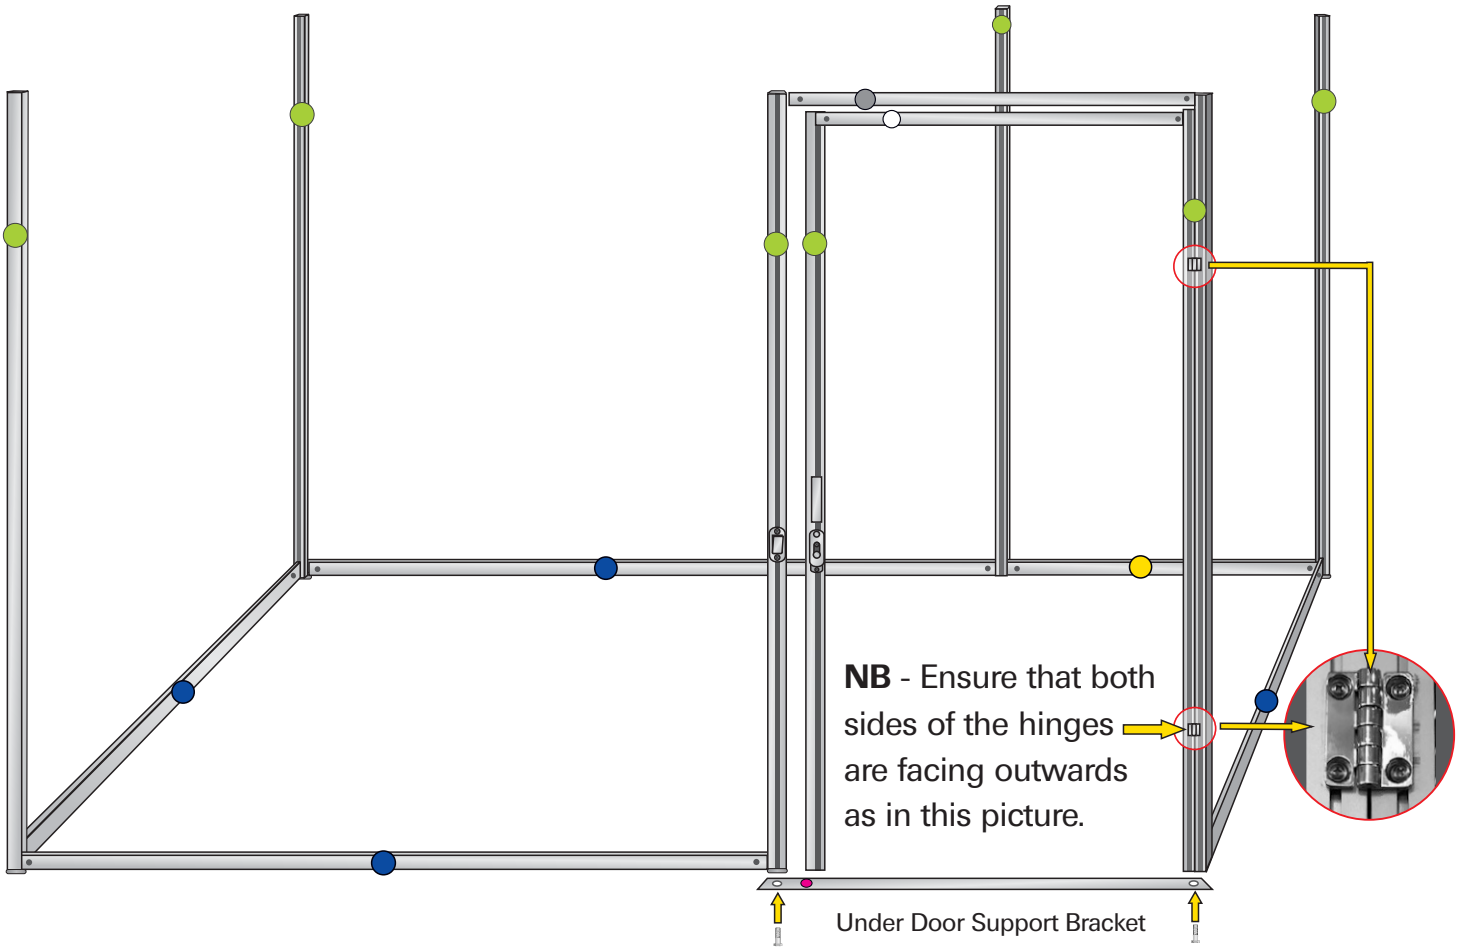

Use the supplied tool to turn the bolt

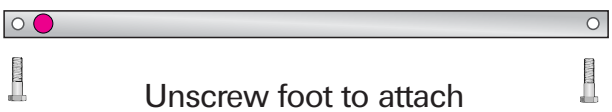

The lock will lock the beam in place.

To build a 2x3 Sukkah

Step 1 - Start with the bottom and upright beams first.

Unscrew foot to attach
"Under Door Support Bracket"
and reattach with foot.

Door Placement

Kindly note that on the hinged profiles, all hinges need to face outwards.

The uneven side of the two profiles needs to be on top. This will allow for an extra support bar at the top of the Sukkah.

Depending on which way your hinged beam is set up, your Sukkah door will either open to the left or the right.

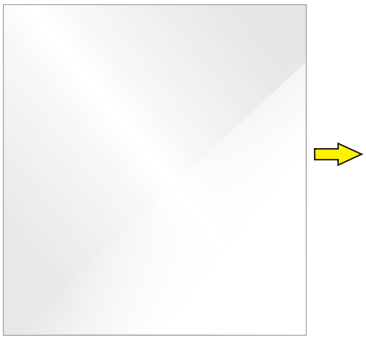

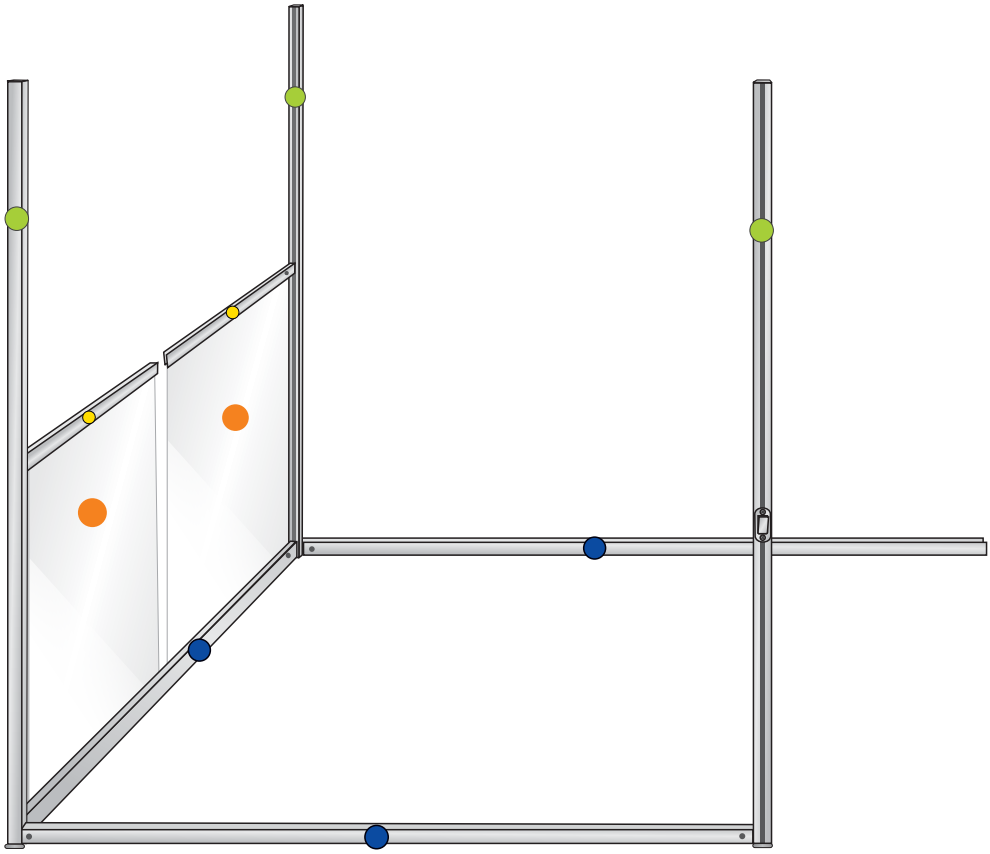

Step 2 – Insert the first row of panels into the slots

Pic 1 – Panel going in

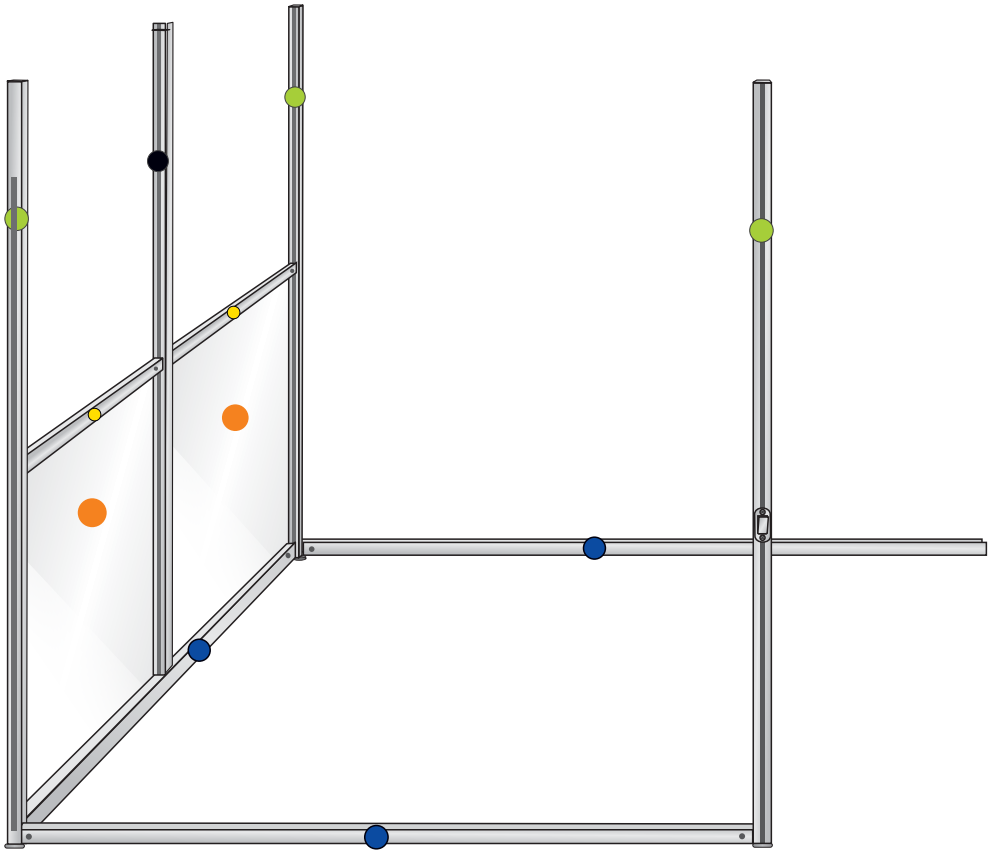

On a 2 meter wall, use a 2-slot upright beam between the two panels

NB: Panels are not exactly square. Make sure you insert the panels long side up.

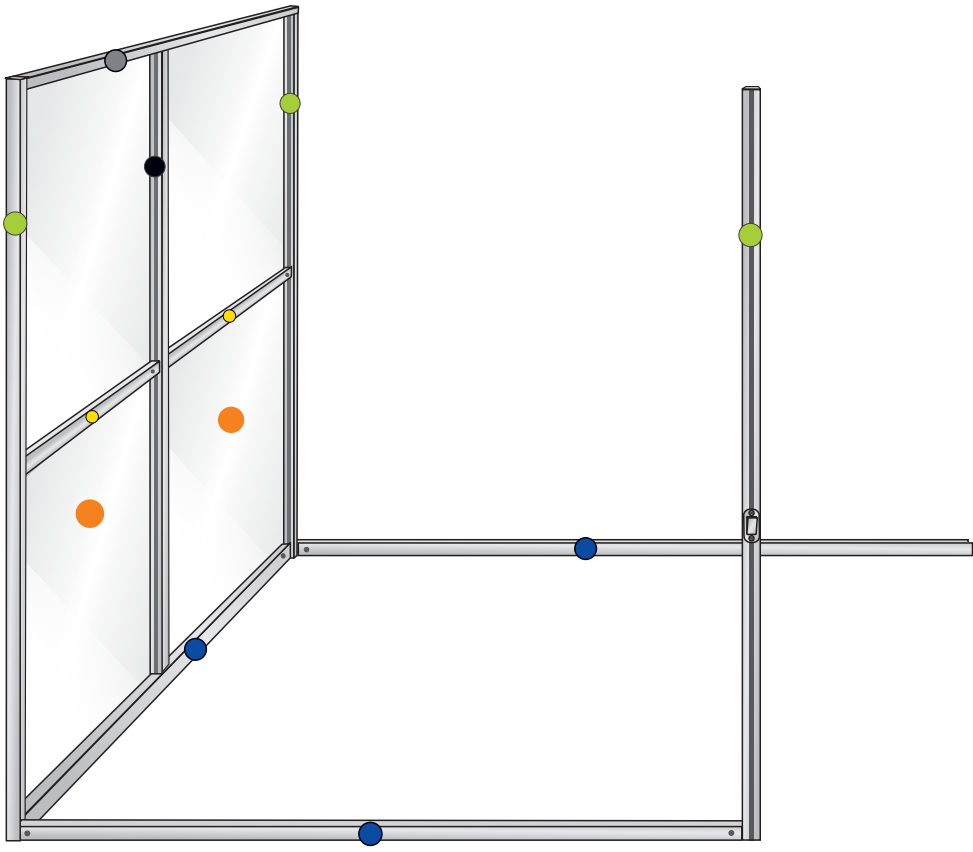

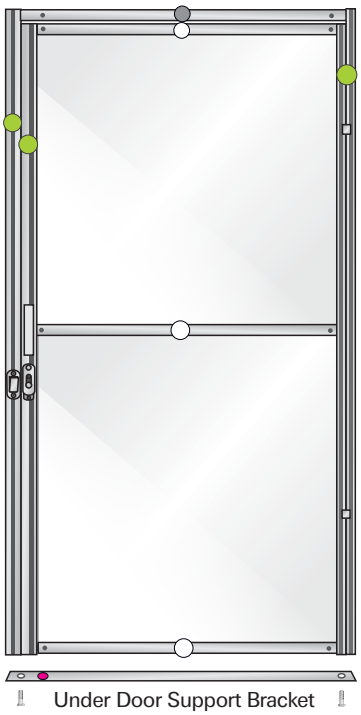

Pic 2 – 2 slot upright

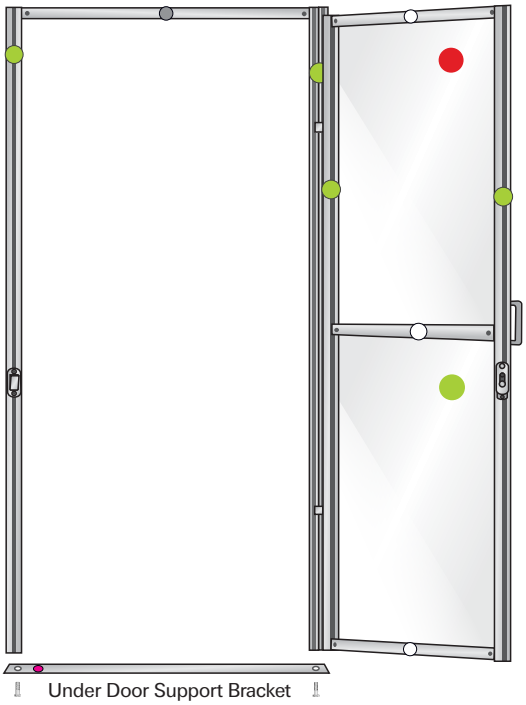

Step 3 – Place a crossbeam on top of the panel, insert a second panel on top of the crossbeam and close the top off with a 1 or 2 meter crossbeam.
Leave a gap for your window.

Step 4 – To complete the door, place the white panel with the green sticker at the bottom, a 1 meter crossbeam on top of it, followed by the white panel with the red sticker and another 1 meter crossbeam.

Door Closed

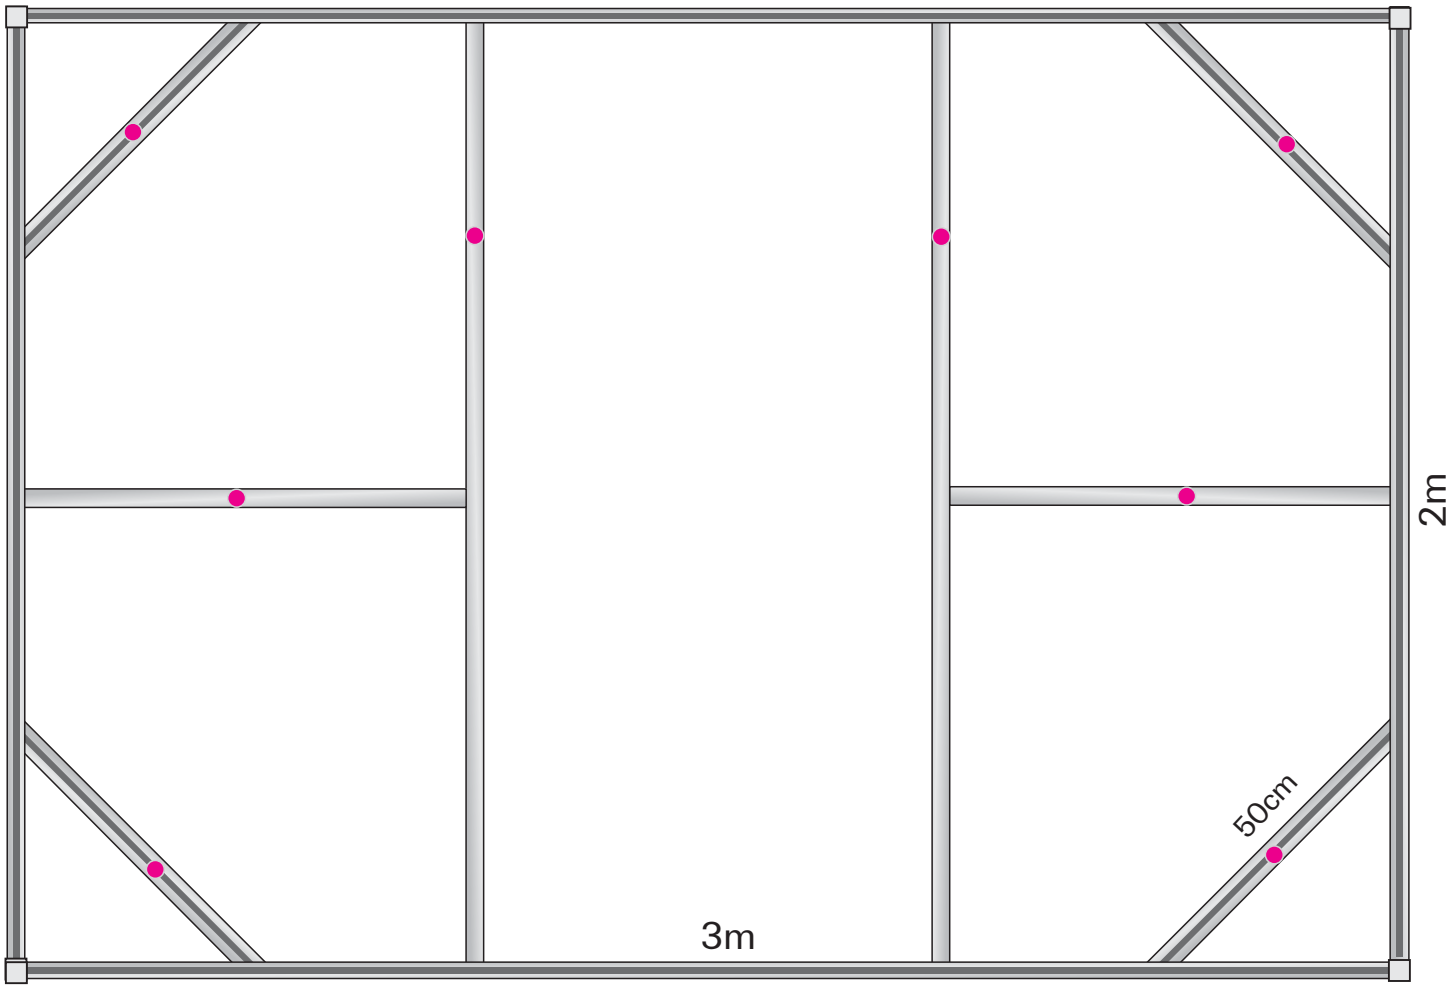

Door Open

Step 5 – Place the window in whichever panel you want it to be.

Step 6 – Place top supports ontop of your Sukkah for added strength (Pink Stickers).

2m x 3m ARIAL VIEW

Step 7 – Use remaining supports to anchor your sukkah.
